## LIFESPAN®—WOOD'S NATURAL EVOLUTION

Wood has long been the choice of builders. It is beautiful, versatile, and easy to work with. However, wood is also subject to rot, decay, and insect attack. With **LIFESPAN®**, wood now comes with long-lasting durability and low-maintenance peace of mind.

**LIFESPAN®** pressure treated, pre-primed, finger-jointed boards are appropriate for interior and exterior above ground building applications (American Wood Protection Association (AWPA) UC3A (painted) use class).

## CARBON BASED TREATMENT

**LIFESPAN®** is treated with a Light Organic Solvent Preservative (LOSP) that has been registered for use by the EPA and contains no heavy metals. Unlike traditional dip treatments that only reach outside surfaces, **LIFESPAN®** is pressure treated, ensuring that the biocide penetrates and protects the entire wood substrate. The LOSP used in **LIFESPAN®** is non-corrosive to fasteners, so **LIFESPAN®** can be used with regular galvanized fasteners in exterior applications and any fastener type in interior applications. The LOSP wood preservative, Vacsol® Azure, is manufactured and supplied in New Zealand by Arch Wood Protection (NZ) Limited, a wholly owned subsidiary of Arch Chemicals, Inc. of the USA.

## WOOD WITH A WARRANTY

**LIFESPAN®** is backed by a 30-year limited warranty against termite attack, fungal decay and rot. For more details, please refer to the **LIFESPAN®** Technical Manual or the **LIFESPAN®** website ([www.lifespanoutdoor.com](http://www.lifespanoutdoor.com)).

## ENVIRONMENTALLY SOUND

Our substrate raw materials come only from renewable plantation tree farms and we utilize leading technology and innovative techniques to maximize the recovery of logs into finished products and minimize waste in our mills. For customers needing even more environmental assurance, **LIFESPAN®** is available with FSC certification. Our New Zealand processing mills have FSC chain of custody certification ([www.fsc.org](http://www.fsc.org)), demonstrating that the wood they source meets strict environmental, social, and economic standards.
